

5.6 Angles of Δ's

Feb. 12, 2007

- The Sum of the Angles of
Any Triangle is equal to 180°

? The Degree Measurement of
2 angles of a triangle are
 $36 + 54$. What is the
Measure of the 3rd angle?

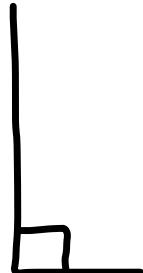

$$\underline{54} + \underline{36} + x = 180^\circ$$

$$90 + x = 180$$

$$\begin{array}{r} -90 \\ -90 \\ \hline \end{array}$$

$$\underline{\underline{x = 90^\circ}}$$

$\triangle KLM$, $m\angle K$ is 2 times $m\angle L$
 $m\angle K = 2(x+4)$
 $m\angle L = x+4$
 $m\angle M$ is 4 more than $m\angle M$

Find $m\angle K$, $m\angle L$, $m\angle M$

which \angle do I need to know first

$$x + x + 4 + 2(x+4) = 180$$

$$x + x + 4 + 2x + 8 = 180$$

$$4x + 12 = 180$$

$$-12 \quad -12$$

$$\frac{4x}{4} = \frac{168}{4}$$

$$x = 42$$

- $m\angle K = 92^\circ$
- $m\angle L = 46^\circ$
- $m\angle M = 42^\circ$
