

## 4.5 cont. Slope

Feb. 07, 2007

Slope: The slope 'm' of a line that passes through the points  $(x_1, y_1)$  &  $(x_2, y_2)$  is:

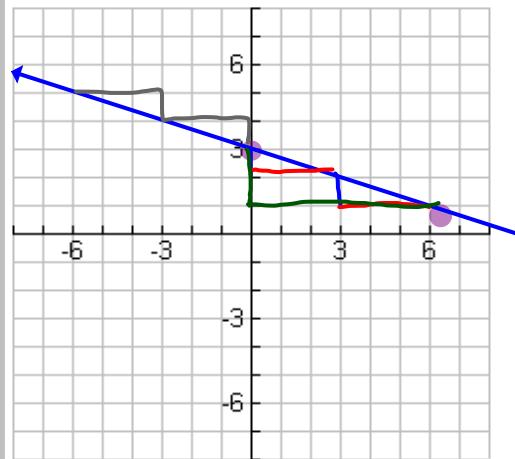

$$m = \text{slope} = \frac{\text{rise}}{\text{run}} = \frac{\text{change in } y}{\text{change in } x}$$

$$= \frac{y_2 - y_1}{x_2 - x_1}$$

Find the Slope of the line that  
Passes through the Points:  $(0, 3), (6, 1)$

$$m = \text{slope} = \frac{\text{rise}}{\text{run}} = \frac{\text{change in } y}{\text{change in } x} = \frac{y_2 - y_1}{x_2 - x_1}$$

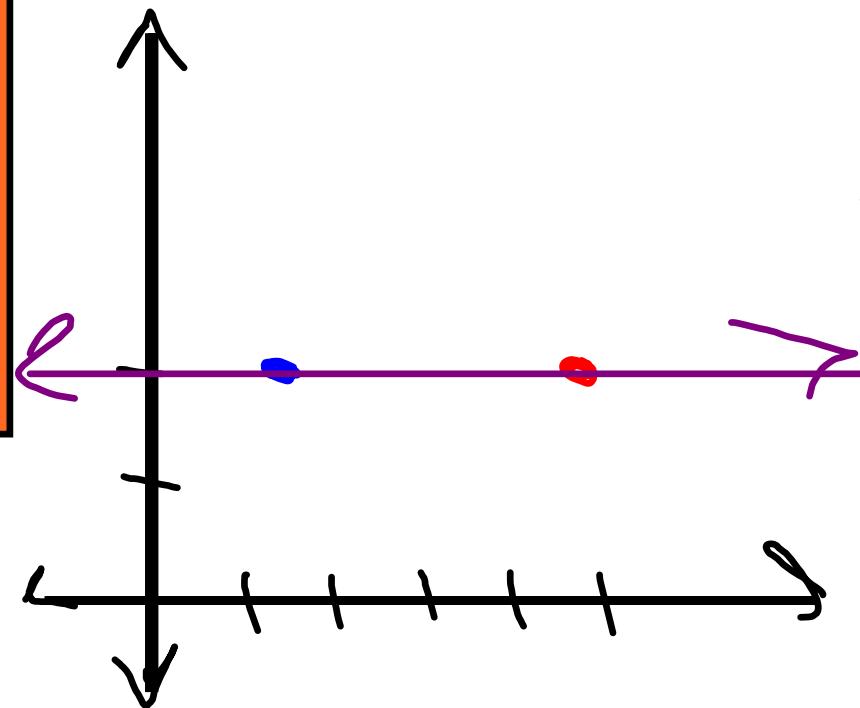

$$= \frac{1 - 3}{6 - 0} = \frac{-2}{6} = \frac{-1}{3}$$

Find the Slope of the line that  
Passes Through the Points:

$$(1, 2) + (5, 2)$$

$$m = \text{Slope} = \frac{\text{rise}}{\text{run}} = \frac{\text{change in } y}{\text{change in } x} = \frac{y_2 - y_1}{x_2 - x_1}$$
$$= \frac{2 - 2}{5 - 1} = \frac{0}{4} = 0$$

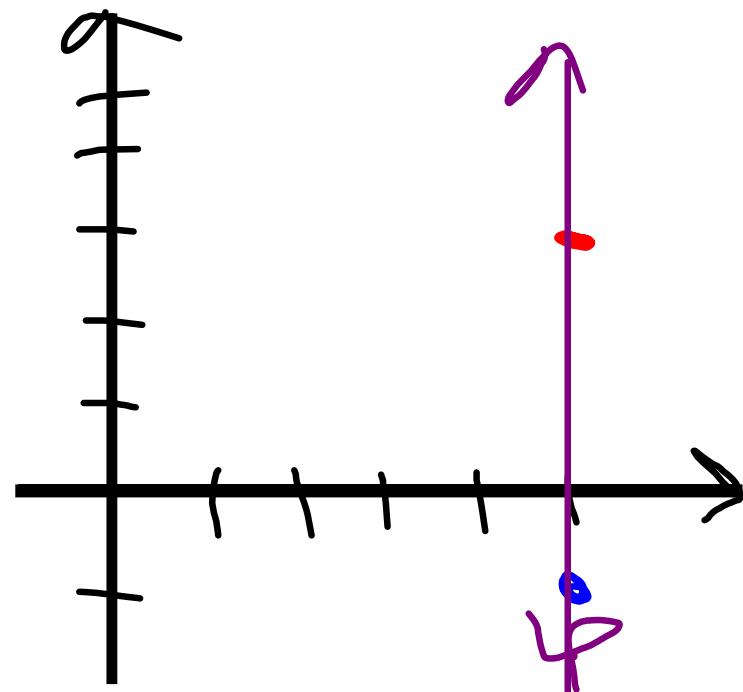

0 Slope for  
horizontal Lines

Find the Slope of the line that  
Passes Through the Points:

$$(5, -1) + (5, 3)$$

$$m = \text{Slope} = \frac{\text{rise}}{\text{run}} = \frac{\text{Change in } y}{\text{Change in } x} = \frac{y_2 - y_1}{x_2 - x_1}$$

$$= \frac{3 + 1}{5 - 5} = \frac{4}{0} = \text{undefined}$$

No Slope! for  
a Vertical Line
