

Algebra IB, Periods 5 and 6: On Friday we covered and introduced the Point-Slope Form of an equation. At the end, both classes were given the assignment Pg. 281-282: 1-7 all, 14, 19, 24. Although each class was given the assignment, none had the opportunity to start/complete the work. So each student from 5th and 6th period should complete the above assignment and turn it in to the respective bin-slot next to the computer monitor. Once that assignment is completed, each student must then do Pg. 282: 26-34 all, Find the Point-Slope Form of the equation ONLY. This should be done on a separate sheet of paper and turned in as well. If they all work on both assignments they should be able to complete both within the one single period
