

10.2 Multiplying Polynomials

April 18, 2007

4 Methods Distributive Method

$$(x+2)(x-3)$$

$$x(x-3) + 2(x-3)$$

$$x(x) - x(3) + 2(x) - 2(3)$$

$$x^2 - 3x + 2x - 6$$

$$x^2 - x - 6$$

We are going to take each term of the 1st Poly. & Dist. or Multiply it by the entire 2nd polynomial

So... This is Really Like Distributing Twice

FOIL Method (binomials only)

First

Outer

Inner

Last

$$(3x+4)(x+5)$$
$$3x(x) + 3x(5) + 4(x) + 4(5)$$
$$3x^2 + \underline{15x} + \underline{4x} + 20$$
$$\underline{\underline{3x^2 + 19x + 20}}$$

ex1)

F.O.I.L.

$$(2x-3)(x+2)$$

$$2x(x) + 2x(2) - 3(x) - 3(2)$$

$$2x^2 + 4x - 3x - 6$$

$$\underline{\underline{2x^2 + x - 6}}$$

Multiply Vertically

$$(x-2)(\underline{5+3x-x^2})$$

$$-x^2 + 3x + \underline{5}$$

$$\otimes \quad \underline{x-2}$$

$$+ \begin{array}{r} +2x^2 - 6x - 10 \\ -x^3 + 3x^2 + 5x \end{array}$$

$$\underline{\underline{-x^3 + 5x^2 - x - 10}}$$

Multiply Poly. w/ 3 or More Terms

- * Largest Poly. Goes on top.
- ** S.F.

$$\begin{array}{r} 123 \\ \otimes 123 \\ \hline 369 \\ + 2460 \\ \hline \underline{\underline{2829}} \end{array}$$

Multiply Horizontally

This is just like the D.P.M. But w/ Larger than Binomials

$$(4x^2 - 3x - 1)(2x - 5)$$

$$4x^2(2x - 5) - 3x(2x - 5) - 1(2x - 5)$$
$$\underline{8x^3} - \underline{20x^2} - \underline{6x^2} + \underline{15x} + \underline{2x} + \underline{5}$$

$$\underline{\underline{8x^3 - 26x^2 + 13x + 5}}$$

For All Binomials...
Use FOIL ONLY!

O.T.L.
