Evaluate the Variable Expression

Let $y = 2$

ex1

$$5y \xrightarrow{\text{exp.}} 5(2) \xrightarrow{\text{sub.}} \underline{\underline{10}} \xrightarrow{\text{Simp.}}$$

$$\frac{28}{y} \xrightarrow{\text{exp.}} \frac{28}{(2)} \xrightarrow{\text{sub.}} \underline{\underline{14}} \xrightarrow{\text{Simp.}}$$

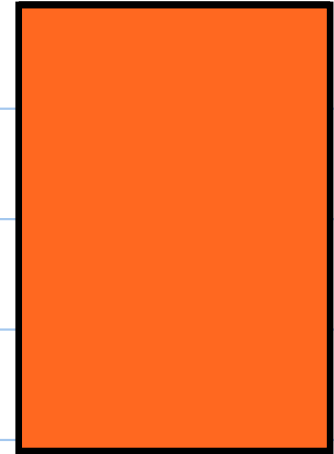

ex2) Let a=3 : 4a ← Bah will give this

#

$$\begin{array}{l} 4a \\ 4(3) \\ \underline{\underline{12}} \end{array}$$

→ exp.
→ sub.
→ simp.

#

#

$$(Rate) \cdot (Time) = Distance$$
$$\boxed{r \cdot t = d}$$

find the distance 'd'
traveled in 2 hours if the
car is going 80 mph.

$$r \cdot t = d \quad \rightarrow \text{exp.}$$

$$\underline{(80)} \cdot \underline{(2)} = d \quad \rightarrow \text{sub.}$$

$$\underline{\underline{160 \text{ miles}}} = d \quad \rightarrow \text{simp}$$

find 'd' if the car is
going 55 mph in 3 hrs.

$$r \cdot t = d \quad \rightarrow \text{exp.}$$

$$\underline{(55) \cdot (3)} = d \quad \rightarrow \text{sub.}$$

$$\underline{\underline{165 \text{ miles}}} = d \quad \rightarrow \text{Simp.}$$
