Quiz Tomorrow,

Oct. 19, 2006

3.1 - Solve Equ. w/ Add + Subt.

3.2 - Solve Equ. w/ Multi. + Divi.

↳ Recip.

3.3 - Multi. Step. Equ.

and More

3.4. - Variable on Both Sides ↗

3.6. Decim.

↳ exact + Approx

↳ Approx. only

Concepts to Remember

The Goal: to get the Variable
By Itself.

What ever we do to one side
of the equal sign

We Must do to the other side
a.k.a. : The Rotten Kid Theory

The Questions:

- Where is the Variable?
- What is happening to it
Right Now?
- What is the opposite operation?
- Do it!

*The Process: *
*The 4 Steps + Def^{ns} to Solve Equations

- ① Simplify: a) No Grouping Symbols
b) Combine Like Terms
- ② Collect the Variables: Get all the Variables to One Side
a.k.a.: The Happy Dance!
- ③ In-Verse Operations: Do the Reverse "Order of Operations"; what ever you Must, to get the Variable by itself.
- ④ Check: Plug the Value for the Variable into the equation to see if it works.

$$\frac{3}{4}(x+8) = 9$$

$$\frac{3}{4}(x) + \frac{3}{4}(8) = 9$$

$$\frac{3}{4}x + 6 = 9$$

$$\frac{3}{4}x - 6 = 9 - 6$$

$$\frac{4}{3}\left(\frac{3}{4}x\right) = \frac{4}{3}(3)$$

$$x = 4$$

Use the Dist. prop
or
the Recip.

$$\frac{4}{3}\left(\frac{3}{4}(x+8)\right) = \frac{4}{3}(9)$$

$$x+8 = 12$$

$$x+8 - 8 = 12 - 8$$

$$x = 4$$

Dist.
Prop.

$$\frac{3}{4}(4x+8) + 7x = 2x + 7$$

$$\frac{3}{4}(4x) + \frac{3}{4}(8) + 7x = 2x + 7$$

$$3x + 6 + 7x = 2x + 7$$

$$10x + 6 = 2x + 7$$

$$-2x \quad -2x$$

$$8x + 6 = 7$$

$$-6 \quad -6$$

$$8x = 1$$

$$\frac{8x}{8} = \frac{1}{8}$$

$$x = \frac{1}{8}$$
