

# 4.5. The Slope Of a Line

Nov. 13, 2006

$$\text{Slope} = \frac{\text{rise}}{\text{run}} = \frac{6}{6} = 1$$

How Many Pts do we Need for a line?  
Slope? 2

The Slope here is 1

ex 1) find the slope of a hill that has a vertical rise of 40m and a horizontal run of 600m.

$$\text{Slope} = \frac{\text{Rise}}{\text{Run}} = \frac{\text{change in } y}{\text{change in } x} = \frac{40}{600} = \frac{1}{15}$$

O.T.L.

$$\underline{\underline{\text{Slope} = \frac{\text{rise}}{\text{run}} =}}$$
